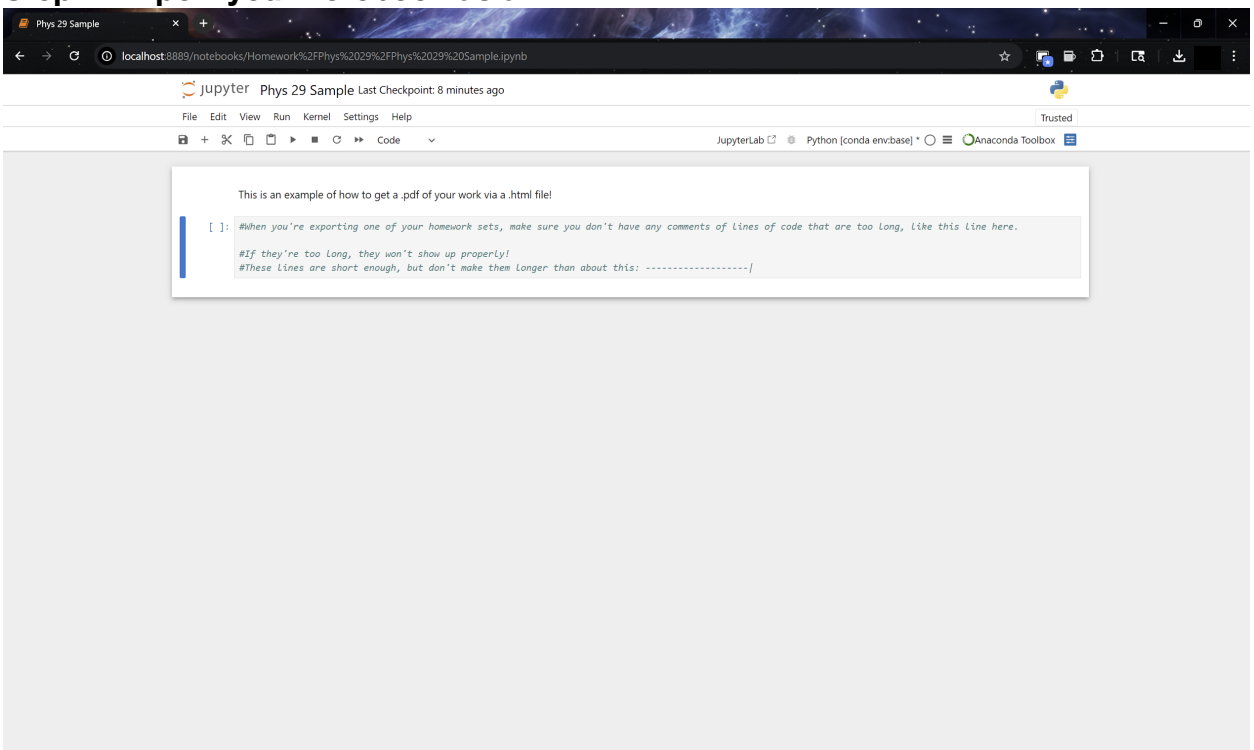
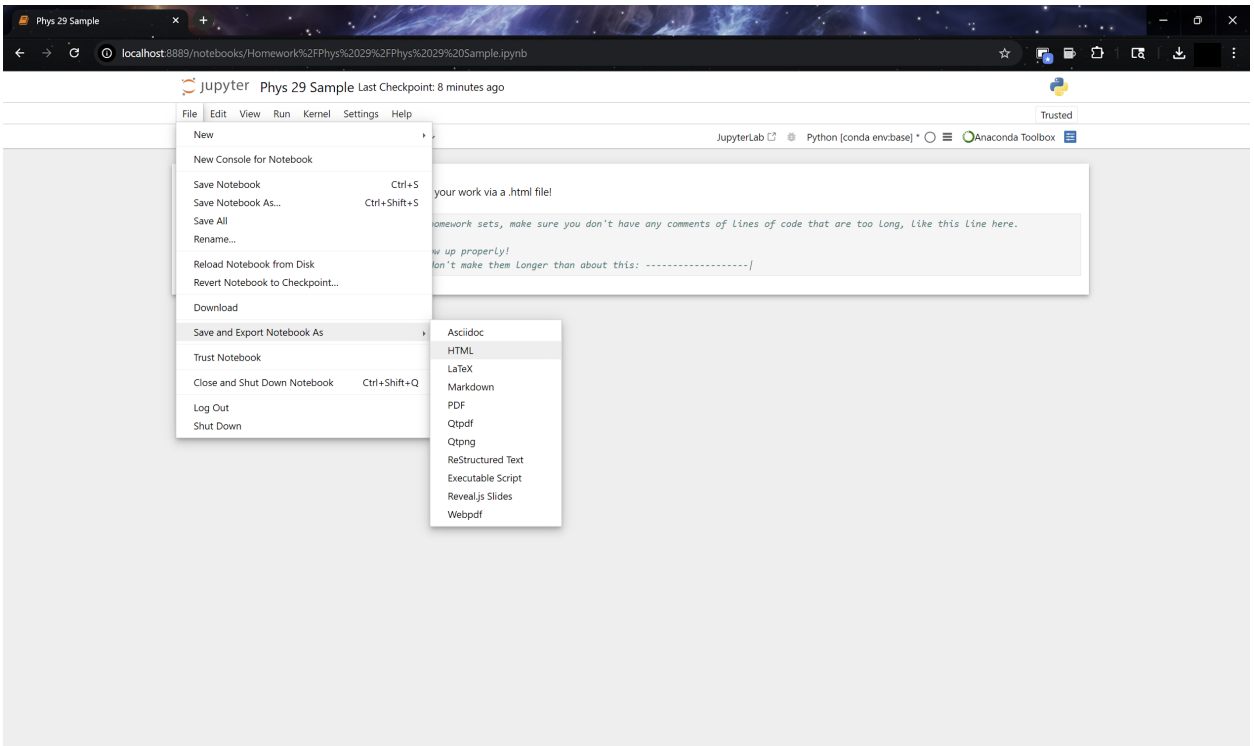
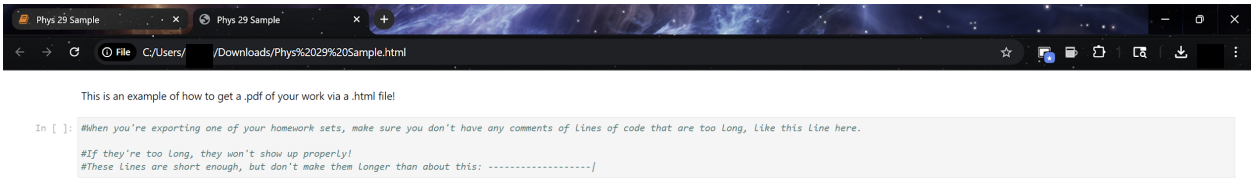
If you are using Jupyter Notebook on a machine that does not allow you to use File > Print, you can follow these steps to save a PDF copy of your notebook:

Step 1: Export your notebook as an HTML



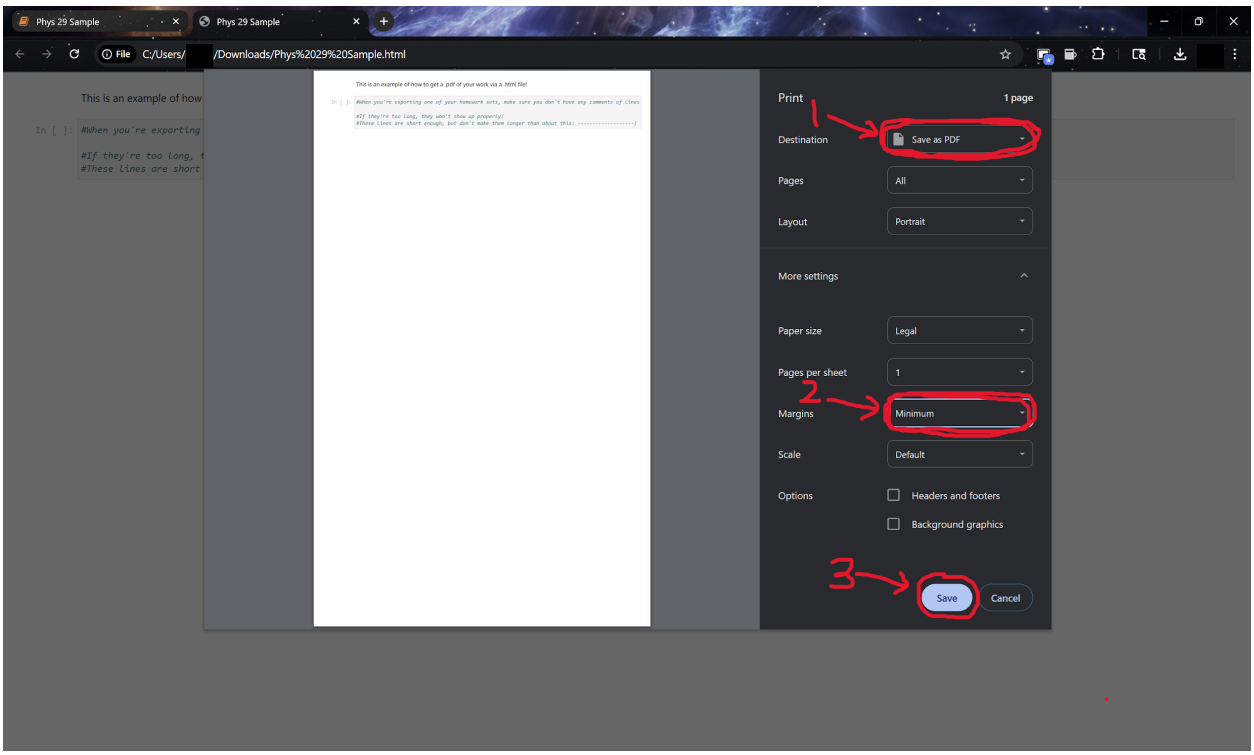


Step 2: Open the HTML file and save as a PDF using ctrl+p.



ctrl + p

You will need to ensure your destination is set to Save as PDF, minimize margins, and click Save



Finally, check your PDF to ensure none of your lines were too long. We cannot grade anything that does not appear in your PDF!
